WORKSHOP BIOCONNECT

« Connecting technological innovations to healthy microbiomes along the food chain : challenges and opportunities. »

November 24th & 25th
2022 in Beauvais

Program and online registration from October 10/2022

This scientific meeting aims to share recent advances on the understanding of microbiomes interactions from soil to animals and their resilience to a changing world. The interdisciplinary nature of the exchanges between academics and industrials will strive to identify knowledge gaps, technical hurdles, new approaches, and research cooperation for promoting beneficial interactions across the food chain from agriculture through manufacturing to health.
